

CARE & USE - CONCRETE TABLE TOPS

The GOMMAIRE concrete table tops are crafted from high-quality reinforced microcement and finished with an advanced polyurethane coating. This creates a seamless, non-porous surface that combines the natural appearance of concrete with enhanced protection against stains, moisture, and daily use.

The following information will help you maintain and protect your tabletop.

DAILY CARE

Maintaining your tabletop is simple, requiring only a gentle and consistent routine.

- Wipe the surface regularly with a soft, damp cloth to remove dust and everyday residue
- Clean spills promptly to preserve the finish
- For deeper cleaning, use a mild, pH-neutral soap diluted in water
- Avoid excessive moisture and always dry the surface after cleaning for the best result.

OCCASIONAL CARE

For light stains or marks that do not respond to regular cleaning, a gentle treatment can help reduce their appearance.

- Apply a soft paste of baking soda and water
- Gently rub with a non-abrasive cloth
- Rinse thoroughly and dry
- While the surface is highly resistant, timely care ensures its appearance remains impeccable.

GOMMAIRE

THOUGHTFUL USE

Concrete is a living material, appreciated for its natural elegance. A few simple habits will help preserve its character. We recommend placing hot cookware on trivets or heat-resistant pads and using cutting boards to prevent surface scratches.

To help maintain the surface, avoid harsh or corrosive cleaning agents, abrasive sponges or brushes, industrial or chemical detergents, and direct contact with extremely hot objects

LONG-TERM CARE

Your tabletop has been designed for both aesthetic appeal and long-term use. The protective finish offers excellent resistance; however, regular care and proper use will help maintain its appearance and performance over time.

To ensure lasting durability, we kindly recommend following the care guidelines provided. Damage resulting from improper use, unsuitable cleaning products, excessive heat exposure, cleaning with high-pressure cleaners, or lack of maintenance falls outside standard warranty conditions.
